## **DETAILED ACTION**

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-16, drawn to a semiconductor device.

Group II, claim(s) 17-23, drawn to a method of making a semiconductor device.

- 2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:
- 3. These inventions clearly lack the same or corresponding special technical feature as the generic claim has been found to exist in the prior art as disclosed by De Los Santos (US Patent 5,808,527).
- 4. Here De Los Santos discloses the use of a hybrid circuit that uses switches to connect various passive components for a filter circuit. The circuit has at least capacitive and inductive circuits, comprising a plurality of elements of a plurality of

Art Unit: 2815

types, as seen in figure 3a. These switches allow the circuits to be interconnected through various layers of interconnects (col. 3).

5. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species 1: drawn to an array of passive components connected by transistors; and

Species 2: drawn to an array of passive components connected by physical switches.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Application/Control Number: 10/518,642 Page 4

Art Unit: 2815

6. The claims are deemed to correspond to the species listed above in the following manner:

Claim 2, drawn to Species 1; and

Claim 3, drawn to Species 2.

The following claim(s) are generic: claim 1 and 3-22.

- 7. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:
- 8. These species clearly lack the same or corresponding special technical feature as the generic claim has been found to exist in the prior art as disclosed by De Los Santos (US Patent 5,808,527).

Here De Los Santos discloses the use of a hybrid circuit that uses switches to connect various passive components for a filter circuit. The circuit has at least capacitive and inductive circuits, comprising a plurality of elements of a plurality of types, as seen in figure 3a. These switches allow the circuits to be interconnected (col. 3).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Durbin whose telephone number is (571) 272-
